

## In-Browser Document Preview

Identify where the accessibility issues appear in your files

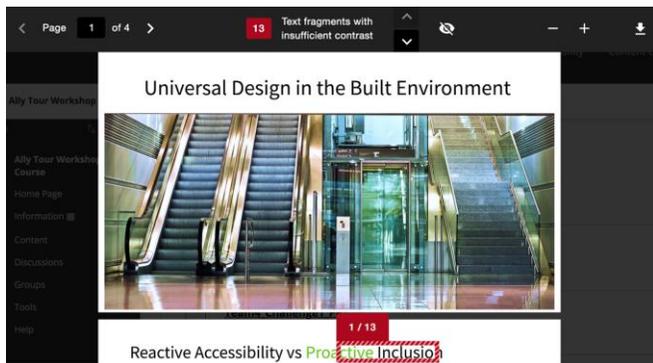

Ally's In-Browser document preview can help you know exactly where certain issues appear in your document. Clicking on an indicator next to your course file, a preview of your document will appear next to the feedback panel.

Ally will highlight certain issues, such as color contrast issues, images missing a description, and tables missing headers, with a red box outline to help you make your fixes when returning to your authoring tool.

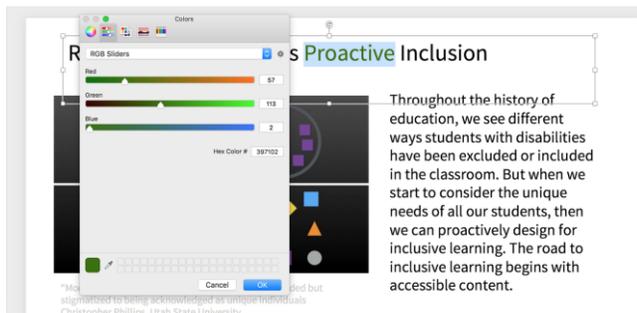

### Scenario: You have a Power Point file with contrast issues

You click the orange indicator next to your PowerPoint presentation. You notice the file has multiple issues. You click on "All Issues", then click on "Fix." In the **In-Document Preview** you see a red box appear around part of your slide.

You can scroll through your document in the preview or use the navigation bar at the top of the preview. The solid red square reports the total number of times contrast issues appear in the document. You can use the up/down arrows to navigate issue by issue, or the page arrows to move page by page. You can toggle the red box outlines on/off by clicking the 'eye' icon.

If you do not have access to the file, download it by clicking the download button in the top right corner of the navigation bar. Use a contrast checker like the "[Colour Contrast Analyzer](#)" from the [Paciello group](#) to ensure your color combinations meet accessibility standards. In Power Point, highlight the text and set the RGB values or hex code to select the desired color. Then upload your fixed file.
